

Metal plating facilities are establishments primarily engaged in all types of electroplating, plating, anodizing, coloring, and finishing of metals and formed products of trade. Most metal platers are small, family owned businesses. The industry provides support to other larger industries, particularly manufacturing industries. The automotive, electronics, machine equipment, and defense industry are the four largest industry segments served by metal platers.

The metal plating process can significantly impact the environment, including air, water, and soil, in a very intense manner. The chemical processes used in metal plating involve the use of various toxic materials, and generate significant amounts of solid and hazardous waste. Hexavalent chromium, a chemical compound intrinsic to the chrome plating process is a known carcinogen.

The metal plating industry is regulated by various federal, state, and local agencies including the United States Environmental Protection Agency, the State Air Resources Board, the State Water Resources Control Board, the Department of Toxic Substances Control, the San Diego Regional Water Quality Control Board, the County of San Diego Air Pollution Control District, and the County of San Diego Department of Environmental Health Hazardous Materials Division (HMD).

In 2004, the HMD identified twenty-six (26) metal plating facilities in San Diego County. HMD regulates over 13,000 businesses countywide and takes formal enforcement (criminal; civil; administrative) against approximately 30 businesses each year. Since 2001, the HMD has filed 7 criminal/civil cases and 2 administrative enforcement cases against metal plating facilities within San Diego County. Given the low number of metal plating shops within San Diego County, the number of formal enforcement cases taken against metal plating shops since 2001 is considered to be fairly significant. Because of the increased level of non-compliance demonstrated within the metal plating industry, the HMD reduced the inspection frequency for metal plating facilities starting in fiscal year 2003-04 from once every 18 months to annually.

This manual is an attempt by HMD to further assist small metal plating facilities within San Diego County to obtain improved compliance with the hazardous materials and hazardous waste regulatory requirements. It is highly recommended that owners and operators and key employees read this manual.

HMD wishes to acknowledge and thank County of San Diego Supervisor Greg Cox and Supervisor Dianne Jacob for their vision and support of this manual.
